Passion

TRAITS

PERSONAL INTERESTS

I am enthusiastic programmer, who is motivated by everyday challenges and tries to solve them using technology and programming since High School. I have several own projects, ranging from games to various tools.

Additionally, I love cycling, exploring the city by bike and rowing. These hobbies are also related to the fact that I am very concerned with the environment and personally try to make our surroundings cleaner, sustainable and eventually more liveable. I love travelling and love to familiarize myself with other cultures and meet with people of different origins. This not only helped to broaden my knowledge, and ultimately led me to apply to university abroad.

Moreover, I love to research and explore; both online and in real life, I am deeply invested in the relationship between technology and humanity, and how changes in technology affects society.
